1st Semester	MCA01001	Discrete Mathematics	L-T-P 3-0-0	3 CREDITS

Module-I **(10 Hours)**

Logic: Propositional equivalence, predicates and quantifiers, Methods of proofs, proof strategy, sequences and summation, mathematical induction, recursive definitions and structural induction, program correctness, prepositional calculus.
Counting: The basics of counting, the pigeonhole principle, permutations and combinations, recurrence relations, solving recurrence relations, generating functions, inclusion-exclusion principle, application of inclusion-exclusion.

Module-II **(10 Hours)**

Relations: Relations and their properties, n-array relations and their applications, representing relations, closure of relations, Warshall's algorithm, equivalence of relations, partial orderings.
Graph theory: Introduction to graphs, graph terminology, representing graphs and graph isomorphism, connectivity, Euler and Hamilton paths, planar graphs, graph coloring, introduction to trees, application of trees.

Module-III **(06 Hours)**

Group theory: Groups, subgroups, generators and evaluation of powers, cosets and Lagrange's theorem, permutation groups and Burnside's theorem, isomorphism, auto orphisms, homomorphism and normal subgroups, rings, integral domains and fields.

Module-IV **(08 Hours)**

Lattice theory: Lattices and algebras systems, principles of duality, basic properties of algebraic systems defined by lattices, distributive and complimented lattices, Boolean lattices and Boolean algebras, uniqueness of finite Boolean expressions.

Module-V **(06 Hours)**

Coding theory: Coding of binary information and error detection, decoding and error correction.

Books:

1. C. L. Liu, D.P. Mohapatra “Elements of Discrete Mathematics- A Computer-Oriented Approach”, 4th Edition, Tata McGraw Hill, 2013.
2. K.H. Rosen, “Discrete Mathematics and its application”, 5th edition, Tata McGraw Hill Publication
3. G. Shankar Rao, “Discrete Mathematical Structure”, New Age Publisher
4. D. P. Acharjaya, Sreekumar “Fundamental Approach to Discrete Mathematics”, New Age Publisher

1st Semester	MCA01002	Computer System Architecture	L-T-P 3-0-0	3 CREDITS

Module – I: **(08 Hours)**

Introduction: Review of basic computer architecture, Quantitative techniques in computer design, measuring and reporting performance.

Module – II: **(08 Hours)**

Pipelining: Basic concepts, Instruction and Arithmetic pipeline, Data hazards, Control hazards and Structural hazards, Techniques for handling hazards. Exception handling. Pipeline optimization techniques.

Module – III: **(08 Hours)**

Hierarchical memory technology: Inclusion, Coherence and locality properties, Cache memory organizations, Techniques for reducing cache misses; Virtual memory organization, Mapping and Management techniques, Memory replacement policies.

Module – IV: **(08 Hours)**

Instruction-level Parallelism: Basic concepts, Techniques for increasing ILP, Superscalar, Superpipelined and VLIW Processor architectures. Array and Vector processors

Module – V: **(08 Hours)**

Multiprocessor architecture: Taxonomy of Parallel Architectures, Centralized shared- memory architecture, Synchronization, Memory consistency, Interconnection networks. Distributed shared memory architecture. Cluster computers

Books:

1. Carl Hamacher, Zvonko Vranesic and Safwat Zaky, "Computer Organization", Fifth Edition, Tata McGraw Hill, 2002.
2. William Stallings, "Computer Organization and Architecture – Designingfor Performance", Sixth Edition, Pearson Education, 2003.
3. Patterson, "Computer Organisation and Design", Elsevier
4. John P Hayes, "Computer Organization", McGraw Hill
5. Morris Mano," Computer System Architecture", PHI

1st Semester	MCA01003	C and Data Structure	L-T-P 3-0-0	3 CREDITS

MODULE – I **(10 Hours)**

C Language Fundamentals, Arrays and Strings

Character set, Identifiers, Keywords, Data Types, Constant and Variables, Statements, Expressions, Operators, Precedence of operators, Input – output Assignments, Control structures, Decision making and Branching, Decision making & looping. Declarations.

MODULE – II **(10 Hours)**

Monolithic vs Modular programs, User defined vs standard functions, formal vs Actual arguments, Functions category, function prototypes, parameter passing, Recursion, Storage Classes: Auto, Extern, Global, Static.Character handling in C. String handling functions. Pointers, Structures, Union & File handling

MODULE – III **(10 Hours)**

Pointer variable and its importance, Pointer Arithmetic passing parameters, Declaration of structures, pointer to pointer, pointer to structure, pointer to function, unions dynamic memory allocations, unions, file handling in C.

MODULE – IV **(10 Hours)**

Development of Algorithms: Notations and Analysis, Storage structures for arrays-sparse matrices, Stacks and Queues: Applications of Stack: Prefix, Postfix and Infix expressions. Circular queue, Double ended queue.

Books:

1. E. Balagurusamy, Programming in ANSI 'C', 8th Edition, Tata McGraw Hill, 2019.
2. Reema Thareja, Data Structures Using C, 2nd Edition ,Oxford University Press, 2014.
3. M. Tanenbaum, "Data Structures using C & C++", Prentice-Hall of India Pvt. Ltd.
4. A.K.Rath and A. K. Jagadev, "Data Structures and Program Design using C", 2nd Edition, Scitech Publications, 2011.
5. Bruno R Preiss, "Data Structures and Algorithms with Object Oriented Design Pattern in C++", John Wiley & Sons, Inc., 1999.
6. Horowitz and Sahani, "Fundamentals of data Structures",Galgotia Publication Pvt. Ltd.

1st Semester	MCA01004	Operating System	L-T-P 3-0-0	3 CREDITS

MODULE-I **(08 Hours)**

Overview of Operating Systems: Introduction, how OS takes System Control, Why OS is essential, Functions of the Operating Systems, Evolution of Operating Systems, Generations of OS.

MODULE-II **(08 Hours)**

Operating System Structure & Processes: Introduction, System Components, Operating System Structure, Operating System Services, System Calls, System Programs, Process, Process States, Process Control.

MODULE-III **(08 Hours)**

Operating System Services for Process Management & Scheduling: Introduction, Process Creation, Termination & Other Issues, Threads, Multithreading, Types of Threads, Schedulers, Types of Schedulers, Types of Scheduling, Scheduling Algorithms, Types of Scheduling Algorithms.

MODULE-IV **(08 Hours)**

Process Synchronization, Interprocess Communication & Deadlock: Introduction, Data Access and Control Synchronization, Critical Sections, Race Condition, Classical Problems & Solutions of Process Synchronization, Semaphores, Message Passing, Deadlock, Conditions for Deadlock, Resource Allocation Graph, Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlocks.

MODULE-V **(08 Hours)**

Memory Management & Virtual Memory: Introduction, Memory Management Schemes, Sharing and Protection in Paging, Sharing and Protection in Segmentation, Virtual Memory, Demand Paging, Page Replacement Algorithms, Thrashing

Books:

1. Silberschatz and Galvin, “Operating System Concepts”, John Wiley Publishing
2. William Stallings, “Operating Systems Internals & Design Principles”, Pearson Education
3. Naresh Chauhan, “Principles of Operating Systems”, Oxford India Publications
4. Pabitra Pal Choudhury, “Operating System Principles and Design”, PHI Publication
5. Sibsankar Halder and Alex A. Aravind, “Operating System”, Pearson Education

1st Semester	MCA01005	Database Engineering	L-T-P 3-0-0	3 CREDITS

Module -I **(06 Hours)**

Introduction to DBMS: concept and overview of DBMS, data models, DB languages, DB users and Administrator, 3-schema architecture of DBMS, data independence, EF Codd Rule.

Module -I I **(06 Hours)**

ER Model: basic concepts, design issues, keys, ER diagram, Weak entity sets, Extended ER features. Relational model: structure of relational model, Relational algebra, Extended relational algebra Operations.

Module – III **(08 Hours)**

Relational database design: FDs, Anamolies in designing DB, Normalization using FDs, various Normal forms-1NF, 2NF, 3NF, BCNF, 4NF, 5NF.

Module-IV **(10 Hours)**

SQL and Integrity Constraints: Concepts of DDL, DML, DCL, various SQL operations: set operations, aggregate functions, constraints, view, nested sub queries, PL/SQL, cursor, trigger.

Module – V **(10 Hours)**

Internals of RDBMS: Query optimization, various optimization algorithms, Transaction processing, concurrency control and recovery management. Advanced Database: OODB, WEB based DB, Data warehousing and Data mining.

Books:

1) Korth, Silverschatz, Abraham," Database system concepts", Tata McGraw Hill Publication
2) R.Elmasri, S.B Navathe, "Fundamentals of Database System", Adision Wesley Publishing
3) Er.Rajiv chopra, "Database management systems, A Practical Approach", S.Chand Publishing
4) Ramkrishna, "Database management systems", Tata McGraw Hill Publication

1st Semester	MCA01006	Data Structure Using C Lab	L-T-P 0-0-3	2 CREDITS

LIST OF EXPERIMENTS:

1. Implementation of Stack Using Array.
2. Implementation of Queue Using Array.
3. Implementation of Infix to Postfix Conversion using Stack.
4. Evaluation of Postfix Expression using Stack.
5. Implementation of Singly Linked List.
6. Implementation of Doubly Linked List.
7. Implementation of Stack Using Linked List.
8. Implementation of Queue Using Linked List.
9. Implementation of Binary Tree Traversal : Preorder, Inorder and Postorder.
10. Implementation of Binary Search Tree.
11. Implementation of sorting algorithms : Bubble Sort, Selection Sort, Insertion Sort, Quick Sort, Merge Sort and Heap sort.
12. Implementation of Searching Algorithms : Linear Search and Binary Search
13. Implementation of Breadth First Search (BFS) in a Graph.
14. Implementation of Depth First Search (DFS) in a Graph.
15. Implementation of Hashing using hash functions.

1st Semester	MCA01007	Operating System Lab	L-T-P 0-0-3	2 CREDITS

LIST OF EXPERIMENTS:

1. Write a C program to simulate the following non-preemptive CPU scheduling algorithms to find turnaround time and waiting time.

a) FCFS b) SJF c) Round Robin (pre-emptive) d) Priority

2. Write a C program to simulate Multi-level Feedback Queue Scheduling algorithm considering the following scenario. All the processes in the system are divided into two categories – System processes and User processes. System processes are to be given higher priority than user processes. Use FCFS scheduling for the processes in each queue.

3. Write a C program to simulate the MVT and MFT memory management techniques.

4. Write a C program to simulate the following Contiguous Memory allocation techniques

a) Worst-fit b) Best-fit c) First-fit

5. Write a C program to simulate Paging technique of Memory management.

6. Write a C program to simulate Bankers algorithm for the purpose of deadlock avoidance.

7. Write a C program to simulate Disk scheduling algorithms a) FCFS b) SCAN c) C-SCAN

8. Write a C program to simulate Page replacement algorithms a) FIFO b) LRU c) LFU

9. Write a C program to simulate Page replacement algorithms a) Optimal

10. Write a C program to simulate Producer-Consumer problem using semaphores.

11. Write a C program to simulate the concept of Dining-Philosophers problem.

1st Semester	MCA01008	Database Engineering Lab	L-T-P 0-0-3	2 CREDITS

LIST OF EXPERIMENTS:

1. Execute a single line and group functions for a table.
2. Execute DCL and TCL Commands.
3. Create and manipulate various DB objects for a table.
4. Create views, partitions and locks for a particular DB
5. Write PL/SQL procedure for an application using exception handling
6. Write PL/SQL procedure for an application using cursors.
7. Write a DBMS program to prepare reports for an application using functions.
8. Write a PL/SQL block for transaction operations of a typical application using triggers.
9. Write a PL/SQL block for transaction operations of a typical application using package.
10. Design and develop an application using any front end and back end tool (make use of ER diagram and DFD).
11. Create table for various relation.
12. Implement the query in sql for a) insertion b) retrieval c) updating d) deletion.
13. Creating Views
14. Writing Assertion
15. Writing Triggers
16. Implementing operation on relation using PL/SQL
17. Creating Forms
18. Generating Reports

3rd Semester	MCA03001	Software Engineering	L-T-P 3-0-0	3 CREDITS

Course Objectives

1. To discuss the software engineering discipline, its evolution, impact and emergence of software engineering and explain the development and use of different software life cycle models for real-life industrial applications.
2. To discuss different aspects of software project management, risk management and configuration management and explain various requirement elicitation, analysis and specification techniques.
3. To discuss various software design methodologies, the impact of cohesion and coupling measures on the goodness of the software design.
4. To discuss the importance of practicing different coding standards, guidelines and different testing strategies along with software reliability metrics and software quality management techniques and standards.

Course Outcome

After reading this subject, students will be able to:

1. Choose a proper life cycle model for different real-life industrial projects, prepare the SRS document, design the software using function-oriented approach (DFDs) and object-oriented approach (UML diagrams), code it, and test the developed software using different software testing strategies.
2. Understand the concepts of computer aided software engineering (CASE) and use different CASE tools in the development, maintenance and reuse of software systems.

Detailed Syllabus

Module I: Software development life cycle and Project Management: Software development life cycle (SDLC) models such as Waterfall model, Iterative waterfall model, Prototyping model, Evolutionary model, Spiral model, V model, RAD, Agile models etc., software project management, project planning, metrics for project size estimation such as LOC and FP, project estimation, COCOMO, Halstead's software science, Staffing level estimation, project scheduling, staffing, Organization and team structure, risk management, configuration management. [11hours]

Module II: Requirements analysis and specification: Requirements gathering and analysis, software requirements specification, formal systems specification. [3 hours]

Module III: Software Design: Outcome of a design process, cohesion and coupling, layered arrangement of modules, approaches to software design, function-oriented software design: overview of SA/SD methodology, structured analysis, DFDs, Data Dictionary, structured design, detailed design, object-oriented software design: UML diagrams such as use case diagram, class diagram, object diagram, sequence diagram, communication diagram, state chart diagram, activity diagram, etc., unified process, OOD goodness criteria. [11 hours]

Module IV: Coding and Testing: Coding standards and guidelines, code review, software documentation, unit testing, black-box testing, white-box testing, debugging, integration testing, system testing, performance testing, regression testing. [8 hours]

Module 5: Software reliability and Quality management: Software reliability, Statistical testing, software quality, software quality management system,ISO 9000, SEI CMM, PSP, Six sigma, CASE Tools, Software maintenance, Software reuse. [7 hours]

Books

1. R. Mall, Fundamentals of Software Engineering, 5th Edition, PHI Learning, 2018.
2. R. S. Pressman, Software Engineering: A Practitioner's Approach, McGraw Hill Publications, 2015.
3. I. Sommerville, Software Engineering, Pearson Education, 2015.
4. K. K. Aggarwal and Yogesh Singh, “Software Engineering”, New Age International Publishing, 2007.
5. Pankaj Jalote, “An Integrated Approach to Software Engineering”, Narosa Publication, 2019.
6. A. Behferooz and F. J. Hudson, Software Engineering Fundamentals, Oxford University Press, 2014.
7. James Peter, W. Pedrycz, “Software Engineering: An Engineering Approach”, John Wiley & Sons, 2000.

3rd Semester	MCA03002	Compiler Design	L-T-P 3-0-0	3 CREDITS

Module- I: (8 Periods)

Compiler Structure: Model of compilation, various phases of a compiler. Lexical analysis: Interface with input parser and symbol table, token, lexeme and patterns, difficulties in lexical analysis, input buffering. Specification of tokens. Regular grammar & language definition.

Module- II: (12 Periods)

Syntax Analysis: Grammar, Parsing, ambiguity, top down parsing, top down parsing, recursive descent parsing, transformation on the grammars, predictive parsing LL(1) grammar, Nor LL(1) grammar, Bottom up parsing, operator precedence grammars, LR parsers (SLR, CLR, LALR).

Module- III: (10 Periods)

Syntax directed definitions: Inherited and synthesized attributes, dependency graph, evaluation order, bottom up and top down evaluation of attributes, L- and S-attributed definitions. Type checking: type: type system, type expressions, structural and name equivalence of types, type conversion. Run time system: storage organization, activation tree, activation record, parameter passing symbol table, dynamic storage allocation.

Module- IV: (10 Periods)

Intermediate code generation: intermediate code representation techniques. Intermediate Code generation for control flow, function call, Boolean expressions and procedure calls. Code optimization: source of optimizations, optimization of basic blocks, loops, global dataflow analysis, solution to iterative dataflow equations, code improving transformations, dealing with aliases, data flow analysis of structured flow graphs.

Module- V: (10 Periods)

Code generation and instruction selection: Issues, basic blocks and flow graphs, register allocation, code generation, DAG representation of programs, code generation from DAGS, peep hole optimization. Symbol table management: Data structure for symbol table organization. Error Handling and recovery.

Books:

1. K. C. Louden, “Compiler Construction, Principle and Practice”, Cengage Publication

2. Alfred V. Aho, Ravi Sethi, and Ullman, “Compilers Priciples, Techniques and Tools”, Pearson Publication

3. V.Raghvan, “Principles of Compiler Design”, TMH Publication

4. Levine, Mason and Brown, “Lex & Yacc”, O’ Reilly Publication

3rd Semester	**MCA03003**	**Elective-I (To be opted from NPTEL MOOC Pool)**	**L-T-P 3-0-0**	**3 CREDITS**

3rd Semester	**MCA03004**	**Elective-II (To be opted from NPTEL MOOC Pool)**	**L-T-P 3-0-0**	**3 CREDITS**

3rd Semester	**MCA03005**	**Elective-III (To be opted from NPTEL MOOC Pool)**	**L-T-P 3-0-0**	**3 CREDITS**

NPTEL MOOC Pool(ForElective-I, Elective-II and Elective-III)

(Student must choose a Course of 8 weeks or more duration and must submit the relevant certificate from NPTEL to the University through the NPTEL Local Chapter before completion of the 4th Semester for the required credit transfer. No University examinations will be conducted for these subjects. Faculty mentors are to be assigned for guiding and monitoring these students through the corresponding NPTEL local chapters)

3rd Semester	MCA03006	Software Engineering Lab	L-T-P 0-0-3	2 CREDITS

Course Objectives:

- To develop SRS document, design documents such as ER Diagrams, DFDs, UML Diagrams etc. for some given software project.
- To develop efficient codes for some given software projects and test the developed code using different tools.
- To implement different software project management techniques.
- To use different computer aided software engineering (CASE) tools.

Course Outcomes:

After reading this subject, students will be able to:

1. Develop SRS document, design documents such as ER Diagrams, DFDs, UML Diagrams etc. for a given software project.
2. Develop efficient codes for a given software project using appropriate coding standards and guidelines and test the developed code using different tools.
3. Implement different software project management techniques such as FP, COCOMO, CPM, PERT etc. .
4. Know the use of different computer aided software engineering (CASE) tools in the development, maintenance and reuse of software systems.

List of Experiments

1. Prepare the SRS document for a given problem, such as the below mentioned problems. You should identify the appropriate requirements for the given problem; Draw the E-R Diagram using any available tool, Draw the DFD for the given problem using any available tool, Draw the Use Case diagram, Domain Models, and Class Diagram, Sequence Diagrams and Collaboration Diagrams for each Use Case, State Chart Diagram and Activity Diagram, (if necessary) using any available tool; Develop the corresponding software using any programming language such as Java, Python, etc. with an interactive GUI and appropriate Database.

   a) Develop software to automate the bookkeeping activities of a 5 star hotel
   b) The local newspaper and magazine delivery agency wants to automate the various clerical activities associated with its business. Develop a software for this.
   c) A small automobile spare parts shop sells the spare parts for vehicles of several makes and models. Each spare part is typically manufactured by several small industries. To streamline the sales and supply ordering, the shop owner wants to automate the activities associated with his business. Develop a software for this.
   d) Develop a software for the automation of the dispensary of your college.
   e) Develop a software for automating various activities of the Estate Office of your college.
   f) Develop a word processing software with some limited number of facilities such as making bold italics, underline, cut, copy and paste etc.
   g) Develop a graphics editor software package, using which one can create / modify several common types of graphics entities.
   h) Develop a software for automating various activities of the departmental offices of your college.

2. Estimate the size of a given software using Function Point Metric.
3. Write a C function for searching an integer value from a large sorted sequence of integer values stored in array of size 100, using the binary search method. Build the control flow graph (CFG) of this function using any compiler writing tool. Write a program in Java to determine its cyclomatic complexity. Identify the linearly independent paths and generate the test cases using path coverage based strategy.
4. To perform various testing operations using the available testing tools for a given system.
5. Write a program in Java to determine the number of defects still remaining after testing, using error seeding methodology.
6. Draw the GANT chart for a given software project using any available tool such GanttProject.
7. Draw the network diagram, find out the critical path and critical activities, and calculate the project duration for a given problem using CPM. You may use any available tool for this such as Ganttproject, ProjectLibre etc.
8. Draw the network diagram, find out the critical path and critical activities, and calculate the project duration for a given problem using PERT. You may use any available tool for this such as Ganttproject, ProjectLibre etc.

3rd Semester	MCA03008	Web Programming Lab	L-T-P 0-0-3	2 CREDITS

1. Web design environment : HTML elements coding and testing
2. Implementation of frames and frame elements
3. Write a JavaScript to design a simple calculator to perform the following operations: sum, product, difference and quotient.
4. Write a JavaScript that calculates the squares and cubes of the numbers from 0 to 10 and outputs HTML text that displays the resulting values in an HTML table format.
5. Write a JavaScript code that displays text “TEXT-GROWING” with increasing font size in the interval of 100ms in RED COLOR, when the font size reaches 50pt it displays “TEXT-SHRINKING” in BLUE color. Then the font size decreases to 5pt.
6. Develop and demonstrate a HTML file that includes JavaScript script that uses functions for the following problems: a. Parameter: A string Output: The position in the string of the left-most vowel b. Parameter: A number Output: The number with its digits in the reverse order
7. Design an XML document to store information about a student in an engineering college affiliated to BPUT. The information must include USN, Name, Name of the College, Brach, Year of Joining, and e-mail id. Make up sample data for 3 students. Create a CSS style sheet and use it to display the document.
8. Write a PHP program to keep track of the number of visitors visiting the web page and to display this count of visitors, with proper headings.
9. Write a PHP program to display a digital clock which displays the current time of the server.
10. Write the PHP programs to do the following:
    a. Implement simple calculator operations.
    b. Find the transpose of a matrix.
    c. Multiplication of two matrices.
    d. Addition of two matrices.
11. Write a PHP program named states that declares a variable states with value "Mississippi Alabama Texas Massachusetts Kansas". write a PHP program that does the following:
    a. Search for a word in variable states that ends in xas. Store this word in element 0 of a list named statesList.
    b. Search for a word in states that begins with k and ends in s. Perform a caseinsensitive comparison. [Note: Passing re.Ias a second parameter to method compile performs a caseinsensitive comparison.] Store this word in element1 of statesList.
    c. Search for a word in states that begins with M and ends in s. Store this word in element 2 of the list.
    d. Search for a word in states that ends in a. Store this word in element 3 of the list
12. Write a PHP program to sort the student records which are stored in the database using selection sort. 11. Web Technology Lab with Mini Project
